## QUALITY POLICY

The Girona Biomedical Research Institute (IDIBGI - 2005) has its origins in the Dr. Josep Trueta Private Foundation (1995), and its purpose is to promote, develop, manage and disseminate biomedical research in the region of Girona. It has been a public entity since 2008, with the entry of the Generalitat into its governing bodies, and is currently a participating centre in the CERCA research programme.

The IDIBGI is structured into the research groups from the Dr. Josep Trueta University Hospital of Girona (HUGT) and the University of Girona (UdG), the Diagnostic Imaging Institute (IDI), the Catalan Institute of Oncology (ICO), the Health Care Institute (IAS), the Institute of Primary Care (IAP) / Catalan Institute of Health in Girona (ICS), the Blood and Tissue Bank (BST) and the University School of Health and Sport in Catalonia (EUSES).

IDIBGI's Quality Policy, in line with strategic planning, is aimed at:

- Achieving the utmost satisfaction of our clients: researchers, public institutions and companies, and fulfilling the needs and expectations of its stakeholders.
- Applying continuous improvement to all our processes and having a mindset based on risk and opportunities.
- Guaranteeing the compliance with applicable legislation and the commitments entered into with our clients.

The IDIBGI considers that the responsibility for the correct application of these principles rests with the entire organisation. Therefore, staff are expected to embrace the spirit of this commitment and collaborate in the development of this policy. It is complemented by the quality objectives approved annually and is available to all interested parties through publication on our website.
